

## "We really cannot take any more" (MA)

*Editor's note:* The letter by Colette McClean (Ontario, Canada), was written in response to this urgent appeal from Neil Andersen and his wife, Betsy, residents of Falmouth, MA. The Andersens have been made very ill by the wind turbines in Falmouth. Both of them suffer tremendously from Wind Turbine Syndrome. [Both were interviewed by Dr. Pierpont last autumn](#)

To: Falmouth Board of Selectmen, 3/29/12 From: Neil Andersen, Blacksmith Shop Rd., Falmouth Regarding: Wind Turbines making us ill I am starting to see stories and hear rumors about the possible start up of Wind 1, on some sort of a curtailed operation. Speaking simply as a fellow human being, and the protector of my family's home, health and well-being, I beg you to reconsider. You know what the turbine has done to my family. You know how we have suffered over these past two years, even as recent as the short intervals during DEP and Vestas equipment testing. I have told you many times that we cannot live in this house with the turbine in operation. There is a dangerous, constant, repetitive and torturous low frequency pulse that is emitted by the turbine that causes physiological and psychological damage. We really cannot take any more. We really cannot take any more. We really cannot take any more. Please do not turn that turbine on. If so, at least get my family out of harm's way first. Again, I beg you to understand. Our lives are in your hands.

As a resident in the province of Ontario, I have now been living with turbines for almost 2 yrs. I can attest to many of the symptoms that the residents of Falmouth describe. Ear ticking,

grinding of teeth, sleepless nights and joint pain—and I count myself as one of the lucky ones. I do not doubt the sincerity of their claims, because they are repeated over and over, right here in Ontario with friends, family, neighbours. I do not understand the disconnect gov't officials are having with respect to wind energy, where everything labelled “green” must be held sacrosanct even over the health and well-being of residents like Neil Andersen. Neil must now BEG his own community to stop the turbines in order to be SAVED from the debilitating effects the Falmouth wind turbines are having on HIS HEALTH and the HEALTH of his family. What could possibly be the motivation of people like Neil Andersen, other than to protect his health, family and home? Why would you even consider foisting this kind of pain on him, his family, and neighbors? Do you as selectmen of Falmouth have the right to harm citizens like Neil for the sake of economic gain? If so, then you must also have the power and means to help Neil GET OUT! Or is it that you believe Neil is lying? How else can one explain your willingness to continue operating the wind turbines? What could possibly be the basis of your willingness to continue harming Neil, his family and his neighbours? Like Neil, I am begging you as well.

Please stop the turbines and stop putting people in harm's way. [Colette McLean](#) R.R. #5, 1245 Gore Rd Harrow, Ontario Canada
